

Stop The Silent Killer

TAKE ACTION

Prevent carbon
monoxide poisoning
in your home.

Carbon Monoxide in homes can kill hundreds and injure thousands of Ontarians every year.

Sources of CO:

Most Ontario households have, on average, 4-6 appliances that produce carbon monoxide.

These appliances include:

- Furnace
- Gas water heater
- Gas fireplace
- Gas stove
- Gas dryer
- Gas barbecue
- Portable generators
- Fuel-burning space heaters

CO Safety Checklist

- Have a certified fuels technician inspect and maintain your gas or oil furnace equipment annually.
- To ensure a technician is registered, call 1-877-682-TSSA (8772) for confirmation.
- Check that outside furnace vents are not blocked.
- Install a CO alarm (on every floor level).
- Never use a fuel-burning appliance or device in an enclosed space.
